2022-11-04 Prof. Dr D. Swaminadhan Erstwhile Andhra Pradesh takes pride in its rich historical and cultural heritage. Its history can give an idea of the glorious past the state has witnessed. Andhra Pradesh, whose recorded history begins in the Vedic period. To gain an independent state based on linguistic identity and protect the interests of the Telugu-speaking people, Potti Sreeramulu fasted to death in 1952. The Andhra Pradesh Reorganisation Act, 2014, commonly known as the Telangana Act, is an Act of the Indian Parliament that bifurcated the residuary Andhra Pradesh state as an outcome of the Telangana movement. However, even after Seven years of Andhra Pradesh of bifurcation on June 2, 2014, both Telangana and the residuary state of Andhra Pradesh continue to suffer bifurcation blues as most of the promises made by the Centre to both the states in the AP Reorganisation Act, 2014, remaining unfulfilled. In addition, there is no reconciliation spirit on agreeing to share water and other assets among the two States. The non-fulfilment of promises made and not a full implementation of the Andhra Pradesh Reorganisation Act-2014, problems of water sharing, assets sharing and political differences, it looks wise to suggest for Reunification of Andhra Pradesh and Telangana into a giant Telugu State with the name "UNITED TELUGU STATES OF INDIA (UTSIND)" with Hyderabad as its Capital City and Amaravathi as a second Capital City. Reunification of the two states solves all the problems they are facing. The book makes a case for forming the "UNITED TELUGU STATES OF INDIA (UTSIND)", which will become the most developed South Indian State with its combined resources.

Mollinga Series: Wageningen University Water Resources Series. This book analyses the struggle over water in a large-scale irrigation system in Raichur District, Karnataka, South India. It looks at water control as a simultaneously technical, managerial and socio-political process. The triangle of accommodation of different categories of farmers, irrigation department officials and local politicians, involving water, votes, money, employment, credit and harassment, is documented. The book shows that the physical infrastructure, notably the division structures, are signposts of struggle, expressing the balance of power between farmers and the irrigation department, and that between head- and tail-end farmers. It concludes with a discussion of irrigation reform efforts in India: reasons for the very slow transformation of the sector, and how a more integrated perspective on irrigation could provide directions for the way forward.

2022-05-24 Prof. Dr. D. Swaminadhan The precarious situation of Planet Earth due to the dangers of nuclear, biological, chemical weapons of mass destruction; environmental degradation leading to global warming; the man-made deadly viruses, apart from natural disasters and the cyber crimes; and the influence of social media on the elections of other countries are causing serious concerns. While the horrifying reminiscence of the World Wars is still haunting, the threat of the Third World War is already hanging as the 'Damocles Sword'. The holocaust created by the atomic bombing of Hiroshima and Nagasaki should not be repeated. Unless serious measures are not undertaken immediately, it is sure that the

destruction of life on Planet Earth may not be far off. The present conflicts like the Russia-Ukraine war and such problems elsewhere on the globe are signalling the potential for a world war. The regional conflicts are threatening world peace and security. The dysfunctions and failings of today's international order, including the UN, are evident. Now we have to find ways to prevent the present regional conflicts from blowing up into a World War situation. Using the existing mechanisms like the UN and through discussions and negotiations, we should try to find solutions. However, success is not assured. In parallel, we have to initiate steps to put in place a permanent democratic and federal system of world government within a reasonable period. The author has presented a proposal for establishing a democratic and federal system of world government to be funded by all the countries. This book aims to provide a future deterrent for world wars and world peace and security.

1993-02-01 National Research Council For developing nations, soil erosion is among the most chronic environmental and economic burdens. Vast amounts of topsoil are washed or blown away from arable land only to accumulate in rivers, reservoirs, harbors, and estuaries, thereby creating a double disaster: a vital resource disappears from where it is desperately needed and is deposited where it is equally unwanted. Despite much rhetoric and effort, little has been done to overcome this problem. Vetiver, a little-known tropical grass, offers one practical and inexpensive way to control erosion on a huge scale in both humid and semi-arid regions. Hedges of this deeply rooted species catch and hold back sediments while the stiff foliage acts as a filter that also slows runoff and keeps moisture on site. This book assesses vetiver's promise and limitations and identifies places where this grass can be deployed without undue environmental risk.

2014-04-09 Sunila S. Kale Throughout the 20th century, electricity was considered to be the primary vehicle of modernity, as well as its quintessential symbol. In India, electrification was central to how early nationalists and planners conceptualized Indian development, and huge sums were spent on the project from then until now. Yet despite all this, sixty-five years after independence nearly 400 million Indians have no access to electricity. Electrifying India explores the political and historical puzzle of uneven development in India's vital electricity sector. In some states, nearly all citizens have access to electricity, while in others fewer than half of households have reliable electricity. To help explain this variation, this book offers both a regional and a historical perspective on the politics of electrification of India as it unfolded in New Delhi and three Indian states: Maharashtra, Odisha, and Andhra Pradesh. In those parts of the countryside that were successfully electrified in the decades after independence, the gains were due to neither nationalist idealism nor merely technocratic plans, but rather to the rising political influence and pressure of rural constituencies. In looking at variation in how public utilities expanded over a long period of time, this book argues that the earlier period of an advancing state apparatus from the 1950s to the 1980s conditioned in important ways the manner of the state's retreat during market reforms from the 1990s onward.

2018-08-31 Shantha Mohan Are you wondering if engineering, science, or business will work as a career choice for a young woman? Do you question if a woman can pursue a successful career in these fields while enjoying a satisfying family life and still find a way to make meaningful social contributions? Then this book, which chronicles the lives and careers of women who managed to do just that, is the one for you. These 29 women all graduated from the oldest engineering college in India sometime between 1943 and 1971. This was a difficult time for these pioneering women to pursue their chosen path, yet they all went on to make their mark in their unique ways in various fields of work in India as well as the USA. Overcoming several obstacles to their careers, they managed to find a good balance between family and work. A few were, and are, also great community leaders. Their lives are models of courage, initiative, perseverance, innovation, entrepreneurship, resilience and flexibility. Enjoy the stories of these courageous women and be inspired.

2015-09-01 Dr. Ravi Kumar Gummadi "A highly successful organisation is built on the strengths of exceptional people. No matter how much technology and mechanisation is developed, no organisation could survive and prosper without them". --- Luszez and Kleiner, 2001 The most important corporate resource over the next few years will be talent: smart, sophisticated business people who are technologically literate, globally astute, and operationally agile. And even as the demand for talent goes up, the supply of it will be going down. This seems to particularly hold true in case of the IT-ITES (Information Technology and Information Technology- Enabled Services) industry in India which requires high quality and highly skilled labour force to cater to the rapidly increasing global demand for software services but is currently facing an increasing shortage of skills supply. Moreover, due to shortages of skilled workers, high turnover rates, and rapid business growth in the service sectors, it has been noted that recruiting, selecting, and placing applicants are among the top three priorities of human resource professionals. Since the IT industry in India is faced with these three challenges, recruitment and selection comprises an important human resource practice in this industry. Further, in this industry, human resources comprise both the raw material and the 'technology', and are therefore of prime importance. As India completes the transition from being an agrarian economy to being a full-fledged, first-world economy, operating at the leading edge of contemporary technology, the IT sector is emerging as major driver of the economy. The Indian IT industry comprises of domestic software and services firms as well as foreign firms looking to consolidate their presence in India owing to the increasing cost pressures in US and Europe. This has increased the need to setup in-house development centers or outsource to third-party service providers in low cost countries such as India. IT and IT enabled services include a wide range of services from back-office data entry and processing to customer contact services, corporate support functions, knowledge support functions and research and design activities. As per the latest Forbes Research, India now controls 44 per cent of the global offshore outsourcing market for software and back office services. As per Nasscom estimates, it is projected to grow to 51 per cent. If this growth is sustained, Nasscom has estimated that there will be a potential shortfall of above 2, 10,000 IT and ITES professionals in India by the year 2012 and demand will out-pace the supply. Though the Indian IT industry is in a strong position to leverage this global software opportunity (as India currently has one of the world's largest, most qualified pools of scientific and engineering manpower), this growing global demand is not only for numbers but also for appropriately skilled, industry-oriented professionals as companies are further scaling their operations and offering high value-added services which involve higher levels of technology and more specialized, higher-end services. Hence, firms which want to maintain their competitive advantage have to carefully recruit and select the most suitable out of the large pool of available manpower. Moreover, according to a recent study by McKinsey & Co., although the potential supply of talent in low wage countries such as India is large and growing rapidly, only a fraction of the job candidates could successfully work at a foreign company on account of their limited suitability i.e. though there are many candidates with the technical skills to fill a position, they may not have the cultural skills to "fit in" with the organisation. The same issue is also faced by large globally competitive domestic Indian firms who are competing for the same pool of talent and skills as their foreign counterparts to remain competitive and survive in global and domestic markets.

2003-02-14 NIIR Board Waste management is the collection, transport, processing or disposal, managing and monitoring of waste materials. The term usually relates to materials produced by human activity, and the process is generally undertaken to reduce their effect on health, the environment or aesthetics. Waste management is a distinct practice from resource recovery which focuses on delaying the rate of consumption of natural resources. The management of wastes treats all materials as a single class, whether solid, liquid, gaseous or radioactive substances, and tried to reduce the harmful environmental impacts of each through different methods. Rapid industrialization last few decades have led to the depletion of pollution of precious natural resources in India depletes and pollutes resources continuously. Further the rapid industrial developments have, led to the generation of huge quantities of hazardous wastes, which have further aggravated the environmental problems in the country by depleting and polluting natural resources. In fact, man today is caught in the vicious circle of increasing wants, declining resources and increasing waste being generated by the industries and municipalities is posing a problem of enormous dimensions. The domestic and industrial effluents are contributing in enhancing this problem. It might become the biggest problem if it is not dealt with immediately. Therefore, rational and sustainable utilization of natural resources and its protection from toxic releases is vital for sustainable socioeconomic development. Hazardous waste management is a new concept for most of the Asian countries including India. The utilization of resources and generation of waste is for beyond the limit that the biosphere was made to carry. This book majorly deals with industrial waste, industrial waste water technology, modern technologies for water pollution control, water recycle & product recovery air pollution control, environmental management system (EMS), surface active agents and contamination of water, physical methods for the treatment of organic acid bearing wastes, realities of waste cyanide treatment in India, biological treatment of aqueous wastes, plastics and generated wastes, alginate industry waste a source of biogas, acid charred waste as a resource material for highly active adsorbent. We have made a sincere effort to bring out this book which helps in minimizing the problem. For the conservation of our environment and sustainable development, we have tried to bring about the solution. This book is a careful attempt in bringing together some selected articles from both entrepreneurs and specialist on all that is possible in the field of waste management.

2013-06-17 Sacchidananda Mukherjee India has moved along an impressive growth path over the last decade, marked with falling share of agriculture, stagnating manufacturing, expanding services segment, growing trade orientation, enhanced FDI inflows etc. The consequent growth implications are obvious as far as the numbers like GDP growth rate and Per Capita GDP trend are concerned, but how sustainable the associated development is with respect to resource management and environmental governance? This book captures the economy-wide impacts of various activities on environment in India. The environmental impacts on water, air, soil quality and human health are captured through case studies from different parts of India. Analyzing separately the concern areas within agriculture (cultivation, aquaculture), manufacturing (industrial pollution, power generation), services (waste management, bio-medical waste, e-waste recycling) and external sector (agricultural trade, FDI inflow, trade in waste products) performance of India, the book attempts to find an answer to that crucial question. The methodology adopted to capture the environmental impacts of various economic activities is derived from the relevant branches like environmental economics, agricultural economics, and water resources economics. The book, focusing on particular sectors, indicates the concern areas and possible ways for enhancing environmental governance.
