Dunn illuminates the nuanced, often imperceptible relationships that exist between homo sapiens and other species, relationships that.

Through the stories of visionaries, Dunn argues that we can create a richer nature, one in which we choose to surround ourselves with species that benefit us, not just those that, despite us, survive.

Musical Vitalities 2018-11-21 Holly Watkins Does it make sense to refer to bird song—a complex vocalization, full of repetitive and transformative patterns that are carefully calculated to woo a mate—as art? What

about a pack of wolves howling in unison or the cacophony made by an entire rain forest? Redefining music as “the art of possibly animate things,” *Musical Vitalities* charts a new path for music studies that blends musicological methods with perspectives drawn from the life sciences. In opposition to humanist approaches that insist on a separation between culture and nature—approaches that appear increasingly untenable in an era defined by human-generated climate change—*Musical Vitalities* treats music as one example of the cultural practices and biotic arts of the animal kingdom rather than as a phenomenon categorically distinct from nonhuman forms of sonic expression. The book challenges the human exceptionalism that has allowed musicologists to overlook music’s structural resemblances to the songs of nonhuman species, the intricacies of music’s physiological impact on listeners, and the many analogues between music’s formal processes and those of the dynamic natural world. Through close readings of Austro-German music and aesthetic writings that suggest wide-ranging analogies between music and nature, *Musical Vitalities* seeks to both rekindle the critical potential of nineteenth-century music and rejoin the humans at the center of the humanities with the nonhumans whose evolutionary endowments and planetary fates they share.

The Wild Life of Our Bodies 2014-12-23 Rob Dunn In the name of progress and clean living, we scrub much of nature off our bodies and try to remove whole kinds of life—parasites, bacteria, mutualists, and predators. To modern humans, nature is the landscape outside. Biologist Rob Dunn contends that while “clean living” has benefited us in some ways, it has also made us sicker in others. We are trapped in bodies that evolved to deal with the dependable presence of hundreds of other species. This disconnect from the web of life has resulted in unprecedented effects that immunologists, evolutionary biologists, psychologists, and other scientists are only beginning to understand. Diabetes, autism, allergies, many anxiety disorders, autoimmune diseases, and even tooth, jaw, and vision problems are increasingly plaguing bodies that have been removed from the ecological context in which they existed for millennia. Dunn considers this crossroads at which we find ourselves. Through the stories of visionaries, Dunn argues that we can create a richer nature, one in which we choose to surround ourselves with species that benefit us, not just those that, despite us, survive.

Conversations and Controversies in the Scientific Study of Religion 2016-02-15 This collection of essays provides scholars in the study of religion occasion to discuss the theoretical and methodological issues raised, to debate and expand upon them, or, in the spirit of scientific inquiry, even to refute the arguments made.

Future Humans 2016-01-01 Scott Solomon "Evolutionary biologist Scott Solomon draws on the explosion of discoveries in recent years to examine the future evolution of our species. Combining knowledge of our past with current trends, Solomon offers convincing evidence that evolutionary forces still affect us today. But how will modernization—including longer lifespans, changing diets, global travel, and widespread use of medicine and contraceptives—affect our evolutionary future?" --publisher description.

Transforming Historical Trauma through Dialogue 2013-04-17 David S. Derezotes "Today there is evidence that most minority groups in the United States suffer from symptoms related to intergenerational transmission of collective historical trauma. For those with additional mental health issues, treatment can become complicated unless underlying historical hostilities are addressed. This practical text, by David S. Derezotes, helps readers understand the causes and treatment of historical trauma at an individual, group, and community level and demonstrates how a participatory, strengths-based approach can work effectively in its treatment."--Publisher's website.

Holistic Nursing 2015-05-23 Barbara Montgomery Dossey Organized by the five Core Values contained within the American Holistic Nurses Association (AHNA) and the American Nurses Association (ANA) *Holistic Nursing: Scope and Standards of Practice, Second Edition*: * Core Value 1: Holistic Philosophy, Theories, and Ethics * Core Value 2: Holistic Caring Process * Core Value 3: Holistic Communication, Therapeutic Environment, and Cultural Diversity * Core Value 4: Holistic Education and Research * Core Value 5: Holistic Nurse Self-Reflection and Self-Care *Holistic Nursing: A Handbook for Practice, Seventh Edition* has been awarded the American Holistic Nurses Association (AHNA) Seal of Distinction. This newly developed Seal of Distinction indicates that the book is aligned with AHNA's mission, vision, and *Holistic Nursing: Scope and Standards of Practice, Second Edition*; is of interest to holistic nurses and of significant value to the nursing profession; provides knowledge that advances holistic nursing; is timely and relevant; is consistent with relevant historical publications; is scientifically and technically accurate; and is authored by individuals with demonstrated expertise in the field of the work submitted. --Provided by publisher.

Children of the Fifth World 2012-10-24 P. M. H. Atwater Our species is evolving in preparation for the new world on the horizon • Explains how the increase in intuitive, creative, and abstract-thinking abilities of children as well as incidences of ADHD, dyslexia, and autism signal evolutionary changes at work in humanity--the emergence of the Fifth Root Race • Connects the appearance of these traits with ancient myths and evolutionary calendars as well as predictions by Teilhard de Chardin, Edgar Cayce, and other visionary seers • Reveals how these “new kids” act as agents for world change by reflecting back every misguided aspect of business, politics, religion, and culture The past 30 years have seen a quantum leap in the intuitive, creative, and abstract-thinking abilities of children as well as an unprecedented rise in incidences of ADHD, dyslexia, and autism spectrum disorders. As P. M. H. Atwater explains, we are witnessing evolution at work. The changes in consciousness and brain function evident in these “new kids” signal the widespread emergence of the Fifth Root Race and, fortuitously, coincide with our transition into the Fifth World. Providing a resource for parents and new kids themselves, Atwater explains what is happening to our species and our world--from neurological changes and climate upheavals to the drive to be constantly “connected” through screen-based technology and the unnecessary widespread use of drug therapies. Sharing individual case histories underscoring the traits of the new-child personality, she reveals how these children, born with universal consciousness encoded in their DNA, act as agents for world change by reflecting back every misguided aspect of business, politics, religion, entertainment, technology, and culture so we can’t ignore what needs to be repaired. Atwater shows how children labeled as autistic or otherwise “damaged” have enormous potential for greatness. Connecting recent events and cultural shifts with creation myths, evolutionary calendars, and historical records from every culture as well as predictions by Teilhard de Chardin, Sri Aurobindo, Edgar Cayce, and other visionary seers, Atwater shows how the genetic shift now occurring follows the “Rule of Thirds” in its progression. Exploring timelines for the next several hundred years, she explains that the coming new world will be tailored specifically for the new kids, who will lead the way in the Great Shift from old world to new.

Body Matters 2019-05-01 Luci Attala *Body Matters* approaches the material world directly; it seeks to remind people that they are the matter of their bodies. This volume offers an assortment of contributions from anthropology, archaeology and medieval studies, with case studies from northern Europe, the Near East, East Africa and Amazonia, which variously draw attention to the multiple shifting materials that comprise, impact upon and co-create human bodies. This lively collection foregrounds myriad material influences interacting with and shaping the human body; the chapters come together to illustrate the fundamental fleshy, bony, suppurating, leaky and oozing physicality of being human. Ultimately, by reminding readers of their indisputable materiality, *Body Matters* seeks to draw people and the rest of the material world together to

illustrate that bodies not only seep into (and are part of) the landscape, but equally that people and the material world are inextricably co-constitutive.

Political Animals and Animal Politics 2018-02-17 Marcel Wissenburg While much has been written on environmental politics on the one hand, and animal ethics and welfare on the other, animal politics is underexamined. There are key political implications in the increase of animal protection laws, the rights of nature, and political parties dedicated to animals.

Brain Beat 2015-10-01 PhD Michael Hoffmann MD Brain Beat: A Scientific and Evolutionary Perspective of Brain Health examines the origins of the pillars of brain health, expounding the current scientific basis for recommending physical exercise, cognitive exercises, sleep hygiene, socialization and brain-foods. However in addition to the "how" question, the more important "why" question is addressed from a neuro-archeological and evolutionary standpoint. The clinical and laboratory brain sciences are replete with ever increasing numbers of p

Posthumanism 2017-04-26 Alan Smart Designed to explain posthumanism to those outside of academia, this brief and accessible book makes an original argument about anthropology's legacy as a study of "more than human." Smart and Smart return to the holism of classic ethnographies where cattle, pigs, yams, and sorcerers were central to the lives that were narrated by anthropologists, but they extend the discussion to include contemporary issues like microbiomes, the Anthropocene, and nano-machines, which take holism beyond locally bounded spaces. They outline what a holism without boundaries could look like, and what anthropology could offer to the knowledge of more-than-human nature in the past, present, and future.

Developing the Virtues 2016 Julia Annas Ethicists and psychologists have become increasingly interested in the development of virtue in recent years, approaching the topic from the perspectives of virtue ethics and developmental psychology respectively. Such interest in virtue development has spread beyond academia, as teachers and parents have increasingly striven to cultivate virtue as part of education and child-rearing. Looking at these parallel trends in the study and practice of virtue development, the essays in this volume explore such questions as: How can philosophical work on virtue development inform psychological work on it, and vice versa? How should we understand virtue as a dimension of human personality? What is the developmental foundation of virtue? What are the evolutionary aspects of virtue and its development? How is virtue fostered? How is virtue exemplified in behavior and action? How is our conception of virtue influenced by context and by developmental and social experiences? What are the tensions, impediments and prospects for an integrative field of virtue study? Rather than centering on each discipline, the essays in this volume are organized around themes and engage each other in a broader dialogue. The volume begins with an introductory essay from the editors that explains the full range of philosophical and empirical issues that have surrounded the notion of virtue in recent years.

What Is a Human? 2020-09-17 James Paul Gee In a sweeping synthesis of new research in a number of different disciplines, this book argues that we humans are not who we think we are. As he explores the interconnections between cutting-edge work in bioanthropology, evolutionary biology, neuroscience, human language and learning, and beyond, James Paul Gee advances, also, a personal philosophy of language, learning, and culture, informed by his decades of work across linguistics and the social sciences. Gee argues that our schools, institutions, legal systems, and societies are designed for creatures that do not exist, thus resulting in multiple, interacting crises, such as climate change, failing institutions, and the rise of nationalist nationalism. As Gee constructs an understanding of the human that takes into account our social, collective, and historical nature, as established by recent research, he inspires readers to reflect for themselves on the very question of who we are—a key consideration for anyone interested in society, government, schools, health, activism, culture and diversity, or even just survival.

The Wild Life of Our Bodies 2011 Rob R. Dunn

The Wild Life of Our Bodies 2011-06-21 Dr. Rob Dunn "An extraordinary book.... With clarity and charm [Dunn] takes the reader into the overlap of medicine, ecology, and evolutionary biology to reveal an important domain of the human condition." —Edward O. Wilson, author of *Anthill* and *The Future of Life* Biologist Rob Dunn reveals the crucial influence that other species have upon our health, our well-being, and our world in *The Wild Life of Our Bodies*—a fascinating tour through the hidden truths of nature and codependence. Dunn illuminates the nuanced, often imperceptible relationships that exist between *homo sapiens* and other species, relationships that underpin humanity's ability to thrive and prosper in every circumstance. Readers of Michael Pollan's *The Omnivore's Dilemma* will be enthralled by Dunn's powerful, lucid exploration of the role that humankind plays within the greater web of life on Earth.

This Phenomenal Life 2017-03-01 Misha Blaise Entertaining, colorful, and deceptively full of facts, *This Phenomenal Life* tells the story of the wondrous ways that humans are always completely at one with our surrounding world. From the vast galaxies above to the miniature microbes within, humans are organically connected to the complex cycles and mysterious processes of our universe. Every single atom of our body is made of remnants of stars and massive explosions in the galaxies, and we share the same biochemical basis of life with all living beings on earth, from a single-celled amoeba to a giant blue whale. Whimsically hip illustrations elucidate wild science-based facts, from the unexpected intimacy we have with fungi on a daily basis, to the similar ways that humans and birds learn to communicate. Powerful evidence of our

interconnection with nature combined with beautiful artwork will inspire the reader to look at the world in a whole new way.

[Anthropology of Infectious Disease](#) 2016-07 Merrill Singer This book synthesizes the flourishing field of anthropology of infectious disease in a critical, biocultural framework. Leading medical anthropologist Merrill Singer holistically unites the behaviors of microorganisms and the activities of complex social systems, showing how we exist with pathogenic agents of disease in a complex process of co-evolution. He also connects human diseases to larger ecosystems and various other species that are future sources of new human infections. Anthropology of Infectious Disease integrates and advances research in this growing, multifaceted area and offers an ideal supplement to courses in anthropology, public health, development studies, and related fields.

Parasites 2016-07-15 Jennifer Viegas Though not thought about as much as viruses or bacteria, parasites are behind much sickness and suffering in both animals and humans all over the world. Parasites range from microscopic protozoans to insects like ticks and lice and intestinal worms. What they all have in common is that their survival comes at the expense of other living things. This book gives readers a solid introduction to these unpleasant but fascinating organisms, describes how they lead to illness, and discusses preventative measures and cures.
