Workforce Needs in Veterinary Medicine 2013-11-17 National Research Council The U.S. veterinary medical profession contributes to society in

diverse ways, from developing drugs and protecting the food supply to treating companion animals and investigating animal diseases in the wild. In a study of the issues related to the veterinary medical workforce, including demographics, workforce supply, trends affecting job availability, and capacity of the educational system to fill future demands, a National Research Council committee found that the profession faces important challenges in maintaining the economic sustainability of veterinary practice and education, building its scholarly foundations, and evolving veterinary service to meet changing societal needs. Many concerns about the profession came into focus following the outbreak of West Nile fever in 1999, and the subsequent outbreaks of SARS, monkeypox, bovine spongiform encephalopathy, highly pathogenic avian influenza, H1N1 influenza, and a variety of food safety and environmental issues heightened public concerns. They also raised further questions about the directions of veterinary medicine and the capacity of public health service the profession provides both in the United States and abroad. To address some of the problems facing the veterinary profession, greater public and private support for education and research in veterinary medicine is needed. The public, policymakers, and even medical professionals are frequently unaware of how veterinary medicine fundamentally supports both animal and human health and well-being. This report seeks to broaden the public's understanding and attempts to anticipate some of the needs and measures that are essential for the profession to fulfill given its changing roles in the 21st century.

Countering the Problem of Falsified and Substandard Drugs 2013-06-20 Institute of Medicine The adulteration and fraudulent manufacture of medicines is an old problem, vastly aggravated by modern manufacturing and trade. In the last decade, impotent antimicrobial drugs have compromised the treatment of many deadly diseases in poor countries. More recently, negligent production at a Massachusetts compounding pharmacy sickened hundreds of Americans. While the national drugs regulatory authority (hereafter, the regulatory authority) is responsible for the safety of a country's drug supply, no single country can entirely guarantee this today. The once common use of the term counterfeit to describe any drug that is not what it claims to be is at the heart of the argument. In a narrow, legal sense a counterfeit drug is one that infringes on a registered trademark. The lay meaning is much broader, including any drug made with intentional deceit. Some generic drug companies and civil society groups object to calling bad medicines counterfeit, seeing it as the deliberate conflation of public health and intellectual property concerns. Countering the Problem of Falsified and Substandard Drugs accepts the narrow meaning of counterfeit, and, because the nuances of trademark infringement must be dealt with by courts, case by case, the report does not discuss the problem of counterfeit medicines.

Report of the Mid Staffordshire NHS Foundation Trust Public Inquiry 2013-02-06 Mid Staffordshire NHS Foundation Trust Public Inquiry This public inquiry report into serious failings in healthcare that took place at the Mid Staffordshire NHS Foundation Trust builds on the first independent report published in February 2010 (ISBN 9780102964394). It further examines the suffering of patients caused by failures by the Trust: there was a failure to listen to its patients and staff or ensure correction of deficiencies. There was also a failure to tackle the insidious negative culture involving poor standards and a disengagement from managerial and leadership responsibilities. These failures are in part a consequence of allowing a focus on reaching national access targets, achieving financial balance and seeking foundation trust status at the cost of delivering acceptable care standards. Further, the checks and balances that operate within the NHS system should have prevented the serious systemic failure that developed at Mid Staffs. The system failed in its primary duty to protect patients and maintain confidence in the healthcare system. This report identifies numerous warning signs that could and should have alerted the system to problems developing at the Trust. It also sets out 290 recommendations grouped around: (i) putting the patient first; (ii) developing a set of fundamental standards, easily understood and accepted by patients; (iii) providing professionally endorsed and evidence-based means of compliance of standards that are understood and adopted by staff; (iv) ensuring openness, transparency and candour throughout system; (v) policing of these standards by the healthcare regulator; (vi) making all those who provide care for patients , properly accountable; (vii) enhancing recruitment, education, training and support of all key contributors to the provision of healthcare; (viii) developing and sharing ever improving means of measuring and understanding the performance of individual professionals, teams, units and provider organisations for the patients, the public, and other stakeholders.

Department of Health: Hard Truths: The Journey to Putting Patients First - Cm. 8751 2013-11-19 Great Britain: Department of Health The Government's initial response, Patients First and Foremost (Cm. 8576, ISBN 9780101857628), set out a radical plan to prioritise care, improve transparency and ensure that where poor care is detected, there is clear action and clear accountability. This document now provides a detailed response to the 290 recommendations the Inquiry made across every level of the system. It also responds to six independent reviews commissioned to consider some of the key issues identified by the Inquiry. This document sets out how the whole health and care system will prioritise and build on this, including major new action in vital areas including: transparent monthly reporting of ward-by-ward staffing levels and other safety measures; a statutory and professional duties of candour; legislate at the earliest available opportunity on Wilful Neglect; a new fit and proper person's test which will act as a barring scheme; all arm's length bodies and the Department of Health have signed a protocol in order to minimise bureaucratic burdens

on Trusts; a new Care Certificate to ensure that Healthcare Assistants and Social Care Support Workers have the right fundamental training and skills in order to give personal care to patients and service users; and the Care Bill will introduce a new criminal offence applicable to care providers that supply or publish certain types of information that is false or misleading, where that information is required to comply with a statutory or other legal obligation. It looks at preventing problems; detecting problems quickly; taking action promptly; ensuring robust accountability and ensuring staff are trained and motivated

The Inquest Handbook 1998 Hugh Selby The book explains the role and objectives of the inquest. It highlights the forms of investigations in several types of fatal accident and gives guidance about the central legal issues and matters of case preparation and presentation. Starting with chapters on the law and the lawyer's preparation, it then discusses what the police do and why, the place of the autopsy, coroner's enquiries and recommendations, and the reasons for and extent of media interest. It covers the forms of investigations in road accidents, natural disasters, drug overdoses, medical or surgical mishaps, pathology and sudden unexpected infant death. It emphasises that inquests are collaborative ventures, often multi-disciplinary events and multi-party, too. Derrick W Hand, New South Wales State Coroner, recommends the book: "The Inquest Handbook is of great importance because it contains up-to-date, comprehensive information by persons considered expert in their field. Not only will it help those working in the coronial jurisdiction, it will also help others to understand the coronial process."
