1999 Carlos G. Steel Aristotle's zoological writings with their wealth of detailed investigations on diverse species of animals have fascinated medieval and Renaissance culture. This volume explores how these texts have been read in various traditions (Arabic, Hebrew, Latin), and how they have been incorporated in different genres (in philosophical and scientific treatises, in florilegia and encyclopedias, in theological symbolism, in moral allegories, and in manuscript illustrations). This multidisciplinary and multilinguistic approach highlights substantial aspects of Aristotle's animals.

2008-02-20 Iain Chambers In *Migrancy, Culture, Identity*, Iain Chambers unravels how our sense of place and identity is realised as we move through myriad languages, worlds and histories. The author explores the uncharted impact of cultural diversity on today's world, from the 'realistic' eye of the painter to the 'scientific' approach of the cultural anthropologist or the critical distance of the historian; from the computer screen to the Walkman and 'World Music'. *Migrancy, Culture and Identity* takes us on a journey into the disturbance and dislocation of culture and identity that faces all of us to explore how migration, marginality and homelessness have disrupted the West's faith in linear progress and rational thinking, undermining our knowledge, history and cultural identity.

2020-08-18 Julie Dachez Translated for the very first time in English, *Invisible Differences* is the deeply moving and intimate story of what it's

like to live day to day with Asperger Syndrome. Marguerite feels awkward, struggling every day to stay productive at work and keep up appearances with friends. She's sensitive, irritable at times. She makes her environment a fluffy, comforting cocoon, alienating her boyfriend. The everyday noise and stimuli assaults her senses, the constant chatter of her coworkers working her last nerve. Then, when one big fight with her boyfriend finds her frustrated and dejected, Marguerite finally investigates the root of her discomfort: after a journey of tough conversations with her loved ones, doctors, and the internet, she discovers that she has Aspergers. Her life is profoundly changed - for the better.

2000-11-24 Christine M. Boeckl Since the late fourteenth century, European artists created an extensive body of images, in paintings, prints, drawings, sculptures, and other media, about the horrors of disease and death, as well as hope and salvation. This interdisciplinary study on disease in metaphysical context is the first general overview of plague art written from an art-historical standpoint. The book selects masterpieces created by Raphael, Titian, Tintoretto, Rubens, Van Dyck, and Poussin, and includes minor works dating from the fourteenth to twentieth centuries. It highlights the most important innovative artistic works that originated during the Renaissance and the Catholic Reformation. This study of the changing iconographic patterns and their iconological interpretations opens a window to the past.

2003-04-30 Pamela O. Long A history of the book and intellectual property that includes military technology and military secrets. Winner of The Morris D. Forkosch Prize from the Journal of the History of Ideas In today's world of intellectual property disputes, industrial espionage, and book signings by famous authors, one easily loses sight of the historical nature of the attribution and ownership of texts. In *Openness, Secrecy, Authorship: Technical Arts and the Culture of Knowledge from Antiquity to the Renaissance*, Pamela Long combines intellectual history with the history of science and technology to explore the culture of authorship. Using classical Greek as well as medieval and Renaissance European examples, Long traces the definitions, limitations, and traditions of

intellectual and scientific creation and attribution. She examines these attitudes as they pertain to the technical and the practical. Although Long's study follows a chronological development, this is not merely a general work. Long is able to examine events and sources within their historical context and locale. By looking at Aristotelian ideas of Praxis, Techne, and Episteme. She explains the tension between craft and ideas, authors and producers. She discusses, with solid research and clear prose, the rise, wane, and resurgence of priority in the crediting and lionizing of authors. Long illuminates the creation and re-creation of ideas like "trade secrets," "plagiarism," "mechanical arts," and "scribal culture." Her historical study complicates prevailing assumptions while inviting a closer look at issues that define so much of our society and thought to this day. She argues that "a useful working definition of authorship permits a gradation of meaning between the poles of authority and originality," and guides us through the term's nuances with clarity rarely matched in a historical study.

2013-02-07 Florian Coulmas How does writing relate to speech? What impact does it have on social organisation and development? How do unwritten languages differ from those that have a written form and tradition? This book is a general account of the place of writing in society. Drawing on contemporary and historical examples, from clay tablets to touchscreen displays, the book explores the functions of writing and written language, analysing its consequences for language, society, economy and politics. It examines the social causes of illiteracy, demonstrating that institutions of central importance to modern society are built upon writing and written texts, and are characterised by specific forms of communication. It explores the social dimensions of spelling and writing reform, as well as of digital literacy, a new mode of expression and communication posing novel challenges to the student of language in society.

2003 Donato Attanasio

1994-08-11 Samuel Scheffler In contemporary philosophy, substantive moral theories are typically classified as either consequentialist or deontological. Standard consequentialist

theories insist, roughly, that agents must always act so as to produce the best available outcomes overall. Standard deontological theories, by contrast, maintain that there are some circumstances where one is permitted but not required to produce the best overall results, and still other circumstances in which one is positively forbidden to do so. Classical utilitarianism is the most familiar consequentialist view, but it is widely regarded as an inadequate account of morality. Although Professor Scheffler agrees with this assessment, he also believes that consequentialism seems initially plausible, and that there is a persistent air of paradox surrounding typical deontological views. In this book, therefore, he undertakes to reconsider the rejection of consequentialism. He argues that it is possible to provide a rationale for the view that agents need not always produce the best possible overall outcomes, and this motivates one departure from consequentialism; but he shows that it is surprisingly difficult to provide a satisfactory rationale for the view that there are times when agents must not produce the best possible overall outcomes. He goes on to argue for a hitherto neglected type of moral conception, according to which agents are always permitted, but not always required, to produce the best outcomes.

2010-09-01 Marta Ajmar "This beautifully illustrated book is the first to look at the role of the urban Italian house in the development of Renaissance art and culture. "The Renaissance

Home" brings together a wide range of objects, from furniture and kitchen utensils to popular prints, jewellery and everyday dress, to reveal how the homes of the upper- and middle-classes made a crucial contribution to the flowering of the visual arts in 15th- and 16th-century Italy. Drawing on a wide array of sources including inventories, account-books, letters, treatises, and archaeological and conservation reports, it offers a completely fresh exploration of the fascinating domestic world of Renaissance Italy."

2021-11-30 Matteo Al Kalak Around the mid-sixteenth century, one of the largest Italian heterodox communities developed in Modena: the community of 'Brothers'. At the beginning of the century, a flourishing humanistic tradition had inspired protests against the authority of the Church and had led many of the city's prominent figures to sympathize with Luther and the Reformation. Over the following decades, such positions became more extreme: most of the 'Brothers' held radical convictions, ranging from belief in predestination to contestation of the Antichrist pope. In some cases, the 'Brothers' even went so far as to deny the value of baptism. This heterodox community in Modena created a hidden network for the free expression of its reformed faith. Within twenty years, however, the election of Pope Pius V (1566-1572) and the consolidation of the Holy Office led to a harsh

campaign to disperse dissenters in the city. Despite the protection of illustrious members of the Roman Catholic hierarchy, the bishops of Modena, and the dukes of Ferrara, the Holy Office succeeded in repressing the community. The history of the 'Brothers' of Modena therefore provides a case study for understanding how the Inquisition influenced the balance of religious Italy, changing the face of the Peninsula forever.

2011 Pamela O. Long *Artisan/Practitioners* offers an introduction to the history of science through new discussion of an influential thesis in the discipline. The "Zinsel thesis" argues that artisans, craftsmen, and other practitioners exerted an important influence on the development of empirical methodologies in the Scientific Revolution, the "new sciences" of the late sixteenth and seventeenth centuries.

Sardelli writes from the perspective of a professional baroque flautist and recorder-player, as well as from that of an experienced and committed scholar, in order to shed light on the bewildering array of sizes and tunings of the recorder and transverse flute families as they relate to Antonio Vivaldi's compositions. Sardelli draws copiously on primary documents to analyse and place in context the capable and surprisingly progressive instrumental technique displayed in Vivaldi's music. The book includes a discussion of the much-disputed chronology of Vivaldi's works, drawing on both internal and external evidence. Each known piece by him in which the flute or the recorder appears is evaluated fully from historical, biographical, technical and aesthetic standpoints. This book is designed to appeal not only to Vivaldi scholars and lovers of the composer's music, but also to players of the two instruments, students of organology and those with an interest in late baroque music in general. Vivaldi is a composer who constantly springs surprises as, even today, new pieces are discovered or old ones reinterpreted. Much has happened since Sardelli's book was first published in Italian, and this new English version takes full account of all these new discoveries and developments. The reader will be left with a much fuller picture of the composer and his times, and the knowledge and insights gained from minutely examining his music for these two wind instruments will be

found to have a wider relevance for his work as a whole. Generous music examples and illustrations bring the book's arguments to life. 2010-11-25 S. J. Heyworth An edition of the most wide-ranging and entertaining of the books of the Latin love poet Propertius.
