Such diverse thinkers as Lao-Tze, Confucius, and U.S.

Defense Secretary Donald

Rumsfeld have all pointed out

that we need to be able to tell the difference between real

and assumed knowledge. The systematic review is a scientific

tool that can help with this difficult task. It can help, for

example, with appraising, summarising, and

communicating the results and implications of otherwise

unmanageable quantities of

data. This book, written by two highly-respected social

scientists, provides an overview of systematic literature review

methods: Outlining the

rationale and methods of

systematic reviews; Giving

worked examples from social science and other fields;

Applying the practice to all social science disciplines; It

requires no previous

knowledge, but takes the

reader through the process

stage by stage; Drawing on

examples from such diverse fields as psychology,

criminology, education,

transport, social welfare, public

health, and housing and urban policy, among others. Including

detailed sections on assessing the quality of both quantitative,

and qualitative research;

searching for evidence in the

social sciences; meta-analytic

and other methods of evidence synthesis; publication bias;

heterogeneity; and approaches to dissemination.

1964-06-15 Kevin Lynch The

classic work on the evaluation of city form. What does the

city's form actually mean to the people who live there? What

can the city planner do to make

the city's image more vivid and

memorable to the city dweller?

To answer these questions, Mr.

Lynch, supported by studies of Los Angeles, Boston, and Jersey

City, formulates a new

criterion—imageability—and

shows its potential value as a guide for the building and

rebuilding of cities. The wide scope of this study leads to an

original and vital method for

the evaluation of city form. The

architect, the planner, and

certainly the city dweller will all want to read this book.
