**The Cambridge History of Communism** 2017-09-21 Norman Naimark  
The second volume of The Cambridge History of Communism explores the rise of Communist states and movements after World War II. Leading experts analyze archival sources from formerly Communist states to re-examine the limits to Moscow's control of its satellites; the de-Stalinization of 1956; Communist reform movements; the rise and fall of the Sino-Soviet alliance; the growth of Communism in Asia, Africa and Latin America; and the effects of the Sino-Soviet split on world Communism. Chapters explore the cultures of Communism in the United States, Western Europe and China, and the conflicts engendered by nationalism and the continued need for support from Moscow. With the danger of a new Cold War developing between former and current Communist states and the West, this account of the roots, development and dissolution of the socialist bloc is essential reading.

*The Poetry of Du Fu* 2015-11-13 Stephen Owen  
The Complete Poetry of Du Fu presents a complete scholarly translation of Chinese literature alongside the original text in a critical edition. The English translation is more scholarly than vernacular Chinese translations, and it is compelled to address problems that even the best traditional commentaries

overlook. The main body of the text is a facing page translation and critical edition of the earliest Song editions and other sources. For convenience the translations are arranged following the sequence in Qiu Zhao'an's *Du shi xiangzhu* (although Qiu's text is not followed). Basic footnotes are included when the translation needs clarification or supplement. Endnotes provide sources, textual notes, and a limited discussion of problem passages. A supplement references commonly used allusions, their sources, and where they can be found in the translation. Scholars know that there is scarcely a Du Fu poem whose interpretation is uncontested. The scholar may use this as a baseline to agree or disagree. Other readers can feel confident that this is a credible reading of the text within the tradition. A reader with a basic understanding of the language of Chinese poetry can use this to facilitate reading Du Fu, which can present problems for even the most learned reader.

**Subdural Hematoma** 2021-10-05 Mehmet Turgut  
This book provides an in-depth review of the current state of knowledge on the intracranial chronic subdural hematoma, with an emphasis on the etiology, risk factors, pathophysiology, anatomic pathology, epidemiology, clinical presentation, imaging findings, and treatment modalities, both medical

and surgical. Sections on the postoperative complications, prognosis, and medicolegal aspects of this illness are also included. Lastly, the book considers future areas of investigation and innovative therapeutic philosophies. This richly illustrated book will help the reader choose the most appropriate way to manage this challenging neurosurgical disease process. It is an ideal resource for neuroscientists at all levels, from graduate students to research scientists, including neurosurgeons, neurologists, neuroradiologists, and pediatricians, and for those seeking both basic and more advanced information regarding the craniospinal subdural hematoma, including acute, subacute and chronic ones.

*Religion and nationalism in Chinese societies* 2017-11-16 Cheng-Tian Kuo Religion and Nationalism in Chinese Societies explores the interaction between religion and nationalism in the Chinese societies of mainland China, Taiwan and Hong Kong. On the one hand, state policies toward religions in these societies are deciphered and their implications for religious freedom and regional stability are evaluated. On the other hand, Chinese Buddhism, Tibetan Buddhism, Daoism, Christianity, Islam and folk religions are respectively analyzed in terms of their theological, organizational and political responses to the nationalist modernity projects of these states. What is new in this book on Religion and Nationalism in Chinese Societies is that the Chinese state has strengthened its control over religion to an unprecedented level. In particular, the Chinese state has almost completed its construction of a state religion called Chinese Patriotism. But at the same time, what is also new is the emergence of democratic civil religions in these Chinese societies, which directly challenge the Chinese state religion and may significantly transform their religion-state relations for better or for worse.

**Martial Arts as Embodied Knowledge** 2011-12-01 D. S. Farrer A wide-ranging scholarly consideration of the martial arts.

**The Chinese in Europe** 2016-07-27 Gregor Benton The Chinese are among Europe's oldest immigrant communities, and are now, in several countries, among the biggest and, economically, the most powerful, drawing increasing interest from other ethnic minorities, governments, and researchers. This volume opens up and delineates this new field of European overseas Chinese studies, reporting on pioneering research on the Chinese in Britain, Denmark, France, Germany, Hungary, Italy, the Netherlands, Portugal, and Spain, and exploring the networks, self-organizations, and migration patterns that are the fabric of the Chinese community in Europe, together with the issues of identity, language, integration, and community building that Chinese throughout the continent face.

Conservation of Ancient Sites on the Silk Road 1997-06-19 Neville Agnew At the Mogao grottoes, a World Heritage Site near Dunhuang in the Gobi Desert, generations of Buddhist monks created hundreds of rock temples. Nearly five hundred of these grottoes remain, lined with painted clay sculptures and wall paintings that depict legends, portraits, customs, and the arts of China over a one-thousand-year period. This volume of symposium proceedings marks the culmination of the first phase of the Getty Conservation Institute's collaborative project with the State Bureau of Culture Relics of the People's Republic of China and the Dunhuang Academy.

**Health in Megacities and Urban Areas** 2011-07-06 Alexander Krämer Diverse driving forces, processes and actors are responsible for different trends in the development of megacities and large urban areas. Under the dynamics of global change, megacities are themselves changing: On the one hand they are prone to increasing socio-economic vulnerability due to pronounced poverty, socio-spatial and political fragmentation, sometimes with extreme forms of segregation, disparities and conflicts. On the other hand megacities offer positive potential for global transformation, e.g. minimisation of space consumption, highly effective use of resources, efficient disaster prevention and health care options - if

good strategies were developed. At present in many megacities and urban areas of the developing world and the emerging economies the quality of life is eroding. Most of the megacities have grown to unprecedented size, and the pace of urbanisation has far exceeded the growth of the necessary infrastructure and services. As a result, an increasing number of urban dwellers are left without access to basic amenities like clean drinking water, fresh air and safe food. Additionally, social inequalities lead to subsequent and significant intra-urban health inequalities and unbalanced disease burdens that can trigger conflict and violence between subpopulations. The guiding idea of our book lies in a multi- and interdisciplinary approach to the complex topic of megacities and urban health that can only be adequately understood when different disciplines share their knowledge and methodological tools to work together. We hope that the book will allow readers to deepen their understanding of the complex dynamics of urban and megacity populations through the lens of public health, geographical and other research perspectives.

Synaptic Function 1987 Neurosciences Institute (New York, N.Y.) This book consists of five sections. The first section details methods for analyzing both presynaptic and postsynaptic function and emphasizes the molecular aspects of synapses. It describes ongoing studies of neurotransmitter release, voltage-sensitive ion channels, and electronic transmission at gap junctions. The second section focuses on the growing menagerie of neurotransmitters: their categorization into chemical families, their relation to ion channels, their modulation by second messenger systems and their role in pharmacologic action. The third section considers the important relationship of transmitter diversity and synaptic types to the behavior of actual cellular networks. All of the studies described in these sections point to the necessity of considering interactions between anatomy, chemistry, physiology and pharmacology if synaptic function is to be understood at any one of these levels of analysis.

**The Question Concerning Technology in China** 2016-09-02 Yuk Hui

A systematic historical survey of Chinese thought is followed by an investigation of the historical-metaphysical questions of modern technology, asking how Chinese thought might contribute to a renewed questioning of globalized technics. Heidegger's critique of modern technology and its relation to metaphysics has been widely accepted in the East. Yet the conception that there is only one—originally Greek—type of technics has been an obstacle to any original critical thinking of technology in modern Chinese thought. Yuk Hui argues for the urgency of imagining a specifically Chinese philosophy of technology capable of responding to Heidegger's challenge, while problematizing the affirmation of technics and technologies as anthropologically universal. This investigation of the historical-metaphysical question of technology, drawing on Lyotard, Simondon, and Stiegler, and introducing a history of modern Eastern philosophical thinking largely unknown to Western readers, including philosophers such as Feng Youlan, Mou Zongsan, and Keiji Nishitani, sheds new light on the obscurity of the question of technology in China. Why was technics never thematized in Chinese thought? Why has time never been a real question for Chinese philosophy? How was the traditional concept of Qi transformed in its relation to Dao as China welcomed technological modernity and westernization? In *The Question Concerning Technology in China*, a systematic historical survey of the major concepts of traditional Chinese thinking is followed by a startlingly original investigation of these questions, in order to ask how Chinese thought might today contribute to a renewed, cosmotechnical questioning of globalized technics.

**Perspectives on Modern Economy** 2020-09-10 Aizhan Khoich This book aims to provide researchers from basic disciplines of the economics fields such as consumer behavior and public economy with a variety of distinctive perspectives in today's world where the behavior and preferences of economic actors have changed completely, and the economic policies of countries have been redrafted.

**The Tale of Tea** 2020-12-11 George L. van Driem The Tale of Teas is the saga of globalisation. Tea gave birth to paper money, the Opium Wars and Hong Kong, triggered the Anglo-Dutch wars and the American war of independence, shaped the economies and military history of Táng and Sòng China and moulded Chinese art and culture. Whilst black tea dominates the global market today, such tea is a recent invention. No tea plantations existed in the world's largest black tea producing countries, India, Kenya and Sri Lanka, when the Dutch and the English went to war about tea in the 17th century. This book replaces popular myths about tea with recondite knowledge on the hidden origins and detailed history of today's globalised beverage in its many modern guises.

*Lacquerware in Asia, Today and Yesterday* 2002 Monika Kopplin Dating back several thousand years, the art of lacquer is one of the most ancient expressions of Asian culture, and this publication provides an overview of the different kinds of methods and materials used in Cambodia, China, India, Korea, Japan, Myanmar, Thailand and Vietnam. The number of people employed in this ancestral art has fallen dramatically throughout Asia in recent decades, and this book considers the challenges to its survival as well as highlighting the importance of documenting past and modern procedures.

**Astrology and Cosmology in Early China** 2013-10-10 David W. Pankenier The ancient Chinese were profoundly influenced by the Sun, Moon and stars, making persistent efforts to mirror astral phenomena in shaping their civilization. In this pioneering text, David W. Pankenier introduces readers to a seriously understudied field, illustrating how astronomy shaped the culture of China from the very beginning and how it influenced areas as disparate as art, architecture, calendrical science, myth, technology, and political and military decision-making. As elsewhere in the ancient world, there was no positive distinction between astronomy and astrology in ancient China, and so astrology, or more precisely, astral omenology, is a principal focus of the book. Drawing on a broad range of sources, including archaeological discoveries, classical

texts, inscriptions and paleography, this thought-provoking book documents the role of astronomical phenomena in the development of the 'Celestial Empire' from the late Neolithic through the late imperial period.

*Fundamentals of Organometallic Catalysis* 2011-11-30 Dirk Steinborn  
Clearly structured and written with advanced undergraduate, graduate and PhD students in mind, this English edition of a successful German

textbook not only focuses on organic reactions, but also on bio-relevant reactions. Important aspects of the catalytic mechanisms are discussed in detail while much additional information is also provided, such as industrial applications of the processes covered. With its many questions and answers included in all chapters at different knowledge levels, this book is also ideal for self-testing before exams.
