2009-07-01 Austin Coates The city is Macao, the Portuguese settlement on the China Coast, as it was more than 200 years ago. The promises are those made by Englishmen to marry their Macao mistresses, only to leave them abandoned and their children bastards. Martha Merop and her English lover are unique in this period. He, son of the founder of Lloyd's and cousin of the philosopher, Jeremy Bentham, was one of the first merchants to oppose the trade in opium. She, Chinese, abandoned at birth and sold into prostitution at the age of thirteen, became an international trader in her own right, the richest woman on the China Coast and Macao's greatest public benefactress.

This moving novel that captures the time and place so convincingly is a historical reconstruction of the years 1780 to 1795 when the two were together. It is based on oral tradition handed down through generations in Macao, and on documents that survive about them in Macao, Lisbon and London. Austin Coates identified Martha Merop's lover, about whom little was known. The documents about

him confirmed the traditional Macao story, and the outcome was this book.

2005-03-10 John M. Lipski The African slave trade, beginning in the fifteenth century, brought African languages into contact with Spanish and Portuguese, resulting in the Africans' gradual acquisition of these languages. In this 2004 book, John Lipski describes the major forms of Afro-Hispanic language found in the Iberian Peninsula and Latin America over the last 500 years. As well as discussing pronunciation, morphology and syntax, he separates legitimate forms of Afro-Hispanic expression from those that result from racist stereotyping, to assess how contact with the African diaspora has had a permanent impact on contemporary Spanish. A principal issue is the possibility that Spanish, in contact with speakers of African languages, may have creolized and restructured - in the Caribbean and perhaps elsewhere - permanently affecting regional and social varieties of Spanish today. The book is accompanied by the largest known anthology of primary Afro-Hispanic texts from Iberia, Latin America, and former Afro-Hispanic contacts in Africa and Asia.

2015-10-01 Sylviane Granger The origins of learner corpus research go back to the late 1980s when large electronic collections of written or spoken data started to be collected from foreign/second language learners, with a view to advancing our understanding of the mechanisms of second language acquisition and

developing tailor-made pedagogical tools. Engaging with the interdisciplinary nature of this fast-growing field, The Cambridge Handbook of Learner Corpus Research explores the diverse and extensive applications of learner corpora, with 27 chapters written by internationally renowned experts. This comprehensive work is a vital resource for students, teachers and researchers, offering fresh perspectives and a unique overview of the field. With representative studies in each chapter which provide an essential guide on how to conduct learner corpus research in a wide range of areas, this work is a cutting-edge account of learner corpus collection, annotation, methodology, theory, analysis and applications.

This volume is divided into three sections. The first explores the pedagogical interventions that are focused on the performance of translation. The second part discusses approaches to translator training. The third part examines some of the pedagogical opportunities and challenges.

2019-09-18 Gloria Corpas Pastor This book constitutes the refereed proceedings of the Third International Conference on Computational and Corpus-Based Phraseology, EuroPhras 2019, held in Malaga, Spain, in September 2019. The 31 full papers presented in this book were carefully reviewed and selected from 116 submissions. The papers in this volume

cover a number of topics including general corpus-based approaches to phraseology, phraseology in translation and cross-linguistic studies, phraseology in language teaching and learning, phraseology in specialized languages, phraseology in lexicography, cognitive approaches to phraseology, the computational treatment of multiword expressions, and the development, annotation, and exploitation of corpora for phraseological studies. 1998 Kirsten Malmkjær For at least a century, attitudes to the use of translation in language teaching have been predominantly negative, the deprecators of the methodology having been particularly vocal at the turn of the 20th century and again in the 1960s and 70s. Yet, for all of this time, translation has remained a significant component in the teaching of many languages in many parts of the world, and the 1980s saw a revival of support for the practice among a number of applied linguists. Language teaching for translators has been rather less contentious. It has always been assumed that translators must know their languages thoroughly, but little has been written about how they, as a special group, might be taught their languages. In the final quarter of the 20th century, attention among translation scholars and pedagogues has turned so decisively away from linguistics that even teaching translators about their languages and how they can be put to use has been frowned on in many quarters. This book

takes a fresh look at both issues. Part One addresses the question of the place and nature of language teaching in translator training programmes. Part Two deals with the issue of how translation might best be used as a teaching and testing methodology in language classes. Finally, the papers in Part Three address the relationship between translation and language teaching from the somewhat divergent points of view of the translator trainer and language teacher.

2018-08-05 Nevil Maskelyne Books like this contain what may be called the raw material of the art, the processes which the magician can employ at will in building up his larger experiments in magic, each of which should be a complete play in itself. Then, when the student has found out how tricks can be done, he would do well to turn his attention to *Our Magic*, by Mr. Maskelyne and his associate, Mr. David Devant. And from this logical treatise he can learn how experiments in magic ought to be composed. It is from this admirable discussion of the basic principles of modern magic that more than one of the points made in this paper have been borrowed. Mr. Devant calls attention to the fact that new tricks are common, new manipulative devices, new examples of dexterity and new applications of science, whereas new plots, new ideas for effective presentation, are rare. He describes a series of experiments of his own, some

of which utilize again but in a novel manner devices long familiar, while others are new both in idea and in many of the subsidiary methods of execution. One of the most hackneyed and yet one of the most effective illusions in the repertory of the conjurer is that known as the *Rising Cards*. The performer brings forward a pack of cards, several of which are drawn by members of the audience and returned to the pack, whereupon at the command of the magician they rise out of the pack one after the other in the order in which they were drawn. In the oldest form in which this illusion is described in the books on the art, the pack is placed in a case supported by a rod standing on a base, and the secret of the trick lies on this rod and its base. The rod is really a hollow tube and the base is really an empty box. The tube is filled with sand, on the top of which rests a leaden weight, to which is attached a thread so arranged over and under certain cards as to cause the chosen cards to rise when it descends down the tube; and in putting the cards into the case the conjurer released a valve at the bottom of the tube, so that the sand might escape into the box, whereby the weight was lowered, the thread then doing its allotted work, and the cards ascending into view, no matter how far distant the performer might then be standing. It seems likely that the invention of this primitive apparatus may have been due to the fact that some eighteenth century conjurer happened to observe the sand running out of an

hour-glass and set about to find some means whereby this escape of sand could be utilized in his art. The hollow rod, the escaping sand, and the descending weight have long since been discarded; but the illusion of the Rising Cards survives and is now performed in an unending variety of ways. The pack may be held in the hand of the performer, without the use of any case, or it may be placed in a glass goblet, or it may be tied together with a ribbon and thus suspended from cords that swing to and from almost over the heads of the spectators; and however they may be isolated the chosen cards rise obediently when they are bidden. The original effect subsists, even though the devices differ....

The Bookman: A Review of Books and Life, Volume 40
2001-01-15 Martha C. Nussbaum
This book is a study of ancient views about 'moral luck'. It examines the fundamental ethical problem that many of the valued constituents of a well-lived life are vulnerable to factors outside a person's control, and asks how this affects our appraisal of persons and their lives. The Greeks made a profound contribution to these questions, yet neither the problems nor the Greek views of them have received the attention they deserve. This book thus recovers a central dimension of Greek thought and addresses major issues in contemporary ethical theory. One of its most original aspects is its interrelated treatment of both literary and philosophical texts. The Fragility of Goodness

has proven to be important reading for philosophers and classicists, and its non-technical style makes it accessible to any educated person interested in the difficult problems it tackles. This edition, first published in 2001, features a preface by Martha Nussbaum.

1784 James Cook First edition of the account of Captain James Cook's third voyage (1776-1780), consisting of three quarto volumes of text and plates, and one folio atlas, the latter without title-page.

1993-11 Richard Rodriguez
Rodriguez's acclaimed first book, *Hunger for Memory* raised a fierce controversy with its views on bilingualism and alternative action. Now, in a series of intelligent and candid essays, Rodriguez ranges over five centuries to consider the moral and spiritual landscapes of Mexico and the US and their impact on his soul.

1983 S. Dale McLemore
This book focuses on the five largest ethnic groups in the U.S. - Mexican Americans, African Americans, Native Americans, Japanese Americans, and Puerto Ricans. McLemore et al present historical information and contemporary examples of the largest ethnic and minority groups in the United States. Using the assimilation model, they analyze the strengths and weaknesses of this model in explaining how various racial and ethnic groups have been incorporated (or not) into U.S. society. Focusing on interracial and interethnic relations in the U.S., the authors give a sociological analysis of intergroup processes and the

history of the interactions of these groups. Organized thematically rather than chronologically, the book illuminates the main racial and ethnic dilemmas faced in America as shown through the examples of these five groups. For anyone interested in Racial and Ethnic Relations, Minority Relations, Multicultural Education, or Ethnic Studies.

Hypochondria, insomnia, restlessness, and yearning are the lame muses of these brief pages. I would have liked to call them Extravaganzas . . . because many of them wander about in a strange outside that has no inside, like drifting splinters. . . . Alien to any orbit, I have the impression they navigate in familiar spaces whose geometry nevertheless remains a mystery; let's say domestic thickets: the interstitial zones of our daily having to be, or bumps on the surface of existence . . . In them, in the form of quasi-stories, are the murmurings and mutterings that have accompanied and still accompany me: outbursts, moods, little ecstasies, real or presumed emotions, grudges, and regrets. —Antonio Tabucchi on *The Flying Creatures of Fra Angelico* From the Trade Paperback edition. 2011-05-25 Harry Francis Mallgrave *The Architect's Brain: Neuroscience, Creativity, and Architecture* is the first book to consider the relationship between the neurosciences and architecture, offering a compelling and provocative study in the field of architectural theory. Explores various moments of architectural thought over the last 500 years as a cognitive manifestation of philosophical, psychological, and physiological theory Looks at architectural thought through the lens of the remarkable insights of contemporary neuroscience, particularly as they have advanced within the last decade Demonstrates the

neurological justification for some very timeless architectural ideas, from the multisensory nature of the architectural experience to the essential relationship of ambiguity and metaphor to creative thinking 2016-04-08 Lynne Bowker *Translation studies as a discipline* has grown enormously in recent decades. Contributions to the discipline have come from a variety of fields, including machine translation, history, literature, philosophy, linguistics, terminology, signed language interpreting, screen translation, translation pedagogy, software localization and lexicography. There is evidently great diversity in translation studies, but is there much unity? Have the different branches of translation studies become so specialized that they can no longer talk to each other? Would translation studies be strengthened or weakened by the search for or the existence of unifying principles? This volume brings together contributions from feminist theory, screen translation, terminology, interpreting, computer-assisted translation, advertising, literature, linguistics, and translation pedagogy in order to counter the tendency to partition or exclude in translation studies. Machine translation specialists and literary translators should be found between the same book covers, if only because the nomadic journeying of concepts is often the key to intellectual discovery and renewal. Celebrating our differences

does not mean ignoring what we have in common. Unity in Diversity offers a valuable overview of the current state of translation studies from both theoretical and practical perspectives and makes an important contribution to debates on the future direction of translation studies. 2015-03-10 F. Scott Fitzgerald "The Bridal Party" is a short story written by F. Scott Fitzgerald featured in the *Saturday Evening Post* on August 9, 1930. The story is based on Ludlow Fowler's brother's, Powell Fowler, May 1930 Paris wedding. It is Fitzgerald's first story dealing with the stock market crash, and celebrates the end of the period when wealthy Americans colonized Paris. 2003 Sonia Colina This new title in the McGraw-Hill Second Language Professional Series contributes to the emerging new discipline of Translation Studies, and, more specifically, to translation pedagogy. As such it connects theory and research to teaching practice through a pedagogical framework that serves as the foundation for teacher education and preparation. While it has as a goal the explanation of relevant theoretical and empirical research, its more encompassing objective is to serve as a handbook for the training of translation teachers. The result is a systematic methodology of translation teaching that replaces the anecdotal approaches that have been dominant in this field. 2013-09-03 Vida JesenÅieik Despite the great number and

diversity of specialised dictionaries and terminologies, several major issues of

specialised lexicography still remain unresolved. The articles in this volume intend to discuss

and resolve such open questions and, at the same time, spawn further research.
