Globalization and Health Inequities in Latin America 2018-04-16 Ligia Malagón de Salazar This book critically analyses the influence of international policies and guidelines on the performance of interventions aimed at reducing health inequities in Latin America, with special emphasis on health promotion and health in all policies strategies. While the implementation of these interventions plays a key role in strengthening these countries' capacity to respond to current and future challenges, the urgency and pressures of cooperation and funding agencies to show results consistent with their own agendas not only hampers this goal, but also makes the territory invisible, hiding the real problems faced by most Latin American countries, diminishing the richness of local knowledge production, and hindering the development of relevant proposals that consider the territory's conditions and cultural identity. Departing from this general analysis, the authors search for answers to the following questions: Why, despite the importance of the theoretical advances regarding actions to address social and health inequities, haven't Latin American countries been able to produce the expected results? Why do successful initiatives only take place within the framework of pilot projects? Why does the ideology of health promotion and health in all policies mainly permeate structures of the health sector, but not other sectors? Why are intersectoral actions conjunctural initiatives, which often fail to evolve into permanent practices? Based on an extensive literature review, case studies, personal experiences, and interviews with key informants in the region, *Globalization and Health Inequities in Latin America* presents a strategy that uses monitoring and evaluation practices for enhancing the capacity of Latin American and other low and middle-income countries to implement sustainable processes to foster inclusiveness, equity, social justice and human rights. p/pp

Communities in Action 2017-04-27 National Academies of Sciences, Engineering, and Medicine In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence,

and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that shape lives. When these factors are not optimal in a community, it does not mean they are intractable: such inequities can be mitigated by social policies that can shape health in powerful ways. *Communities in Action: Pathways to Health Equity* seeks to delineate the causes of and the solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome.
