2003 Richard Holdener The sport compact performance market is hot and getting hotter - and while the Honda Civic and Acura Integra have long been the dominant players in the market, a newcomer is emerging as a popular car for performance modifications - The Ford Focus. Well-built, inexpensive, good looking, and easy to modify, the Focus is quickly catching the Hondas in terms of market popularity.

This book shows Focus owners exactly what it takes to improve their car's performance, from simple modifications like installing a new air intake to radical mods like installing a turbocharger. The author also shows what those modifications can do, with before-and-after dyno tests for each modification.

There's also extensive info on suspension and brake modifications for better handling and braking. It's a one-stop shop for those who want a sharper, faster Focus. Dimensions: 8-3/8 x 10-7/8 inches # of color photographs: None inside- color cover only # of black and white photographs: 300

This fundamental work explains in detail systems for active safety and driver assistance, considering both their structure and their function. These include the well-known standard systems such as Anti-lock braking system (ABS), Electronic Stability Control (ESC) or Adaptive Cruise Control (ACC). But it includes also new systems for protecting collisions protection, for changing the lane, or for convenient parking. The book aims at giving a complete picture focusing on the entire system. First, it describes the components which are necessary for assistance systems, such as sensors, actuators, mechatronic subsystems, and control elements. Then, it explains key features for the user-friendly design of human-machine interfaces between driver and assistance system. Finally,

important characteristic features of driver assistance systems for particular vehicles are presented: Systems for commercial vehicles and motorcycles.

2009-11-02 James May Inspired by James's exploits, the book covers both the stories behind a number of classic toys and the adventures in summer 2009 as James and his helpers, children and adults of all ages, build and recreate a range of toys in a series of Top Gear style escapades. In six ambitious projects, he enlists the help of volunteers and schoolchildren to help him build a 1/1 scale model kit of a Supermarine Spitfire Mk I; creates the world's longest Scalextric track at the historic Brooklands motor-racing circuit in Surrey; builds a full-size Lego house; enters a garden made entirely from Plasticine in the RHS Chelsea Flower Show; runs a Hornby train set along a 10-mile stretch of track from Barnstaple to Bideford and uses a giant Meccano bridge to span the 40ft Pier Head canal in Liverpool. !--StartFragment-- !--EndFragment-- Each chapter includes details of how the projects were constructed, with diagrams, illustrations and informal photography taken

during the filming. The book also features a history of the toys themselves, from true British roots to their international appeal today. Toy Stories also offers 12 simple but fun projects linked to these toys to carry out in your own home, accompanied by step-by-step instructions, illustrations and diagrams.

2016-07-27 Tom Blackett For many companies, brands are now their most valuable assets - yet there is insufficient knowledge within business in general of legal systems that exist to allow brand owners to protect these assets. Equally, few trademark lawyers fully understand the commercial significance of these legal systems for the success of

brand-based businesses. Adopting an interdisciplinary approach, Trademarks divulges the legal enigma to the brand owner, and the business advantage of trademarking to the lawyer, whilst providing a unique insight into all aspects of trademarking for all those fascinated by this channel for success.
